

New Year's Cake Cutting Event

During Theracell's Opendays, the MSc Cell and Gene Therapies cut its New Year's Cake, celebrating its first year of operation at the same time. The night was dedicated to the students of first and second cycle who had the chance to visit the premises of the company that pioneers in the development and placement of innovative cell and gene therapies products.

All the students received a warm welcome by the people who are working for the company. The hospitality created a friendly and cozy atmosphere, enabling the communication and interaction in this first in-person meeting.

Tasting delicious food paired with excellent wine, all the people who attended had the opportunity to express wishes for the new year and views about their studies and their future research and professional plans. They also had the chance to address questions about the working experience in the field of cell and gene therapies. The Director of the Bi-institutional MSc Programme, Professor of Haematology of Patras University, Alexandros Spyridonidis wished everyone a good and creative year. He also offered his thanks to the President of the company, Mr. Fotis Sakellaridis for his valuable and multilevel support towards the founding and operation of the Studies Programme. Addressing the students, he underlined that by choosing to attend this particular MSc Programme, they become pioneers as they have sought to specialize in a sector that once appeared imaginary and now is expected to dominate in the coming years, following the revolutionary changes it has realized in the treatment of incurable diseases.

A student of the first cycle won the gold coin of the Cake and received a check for buying at an electronics shop.

All the guests cordially thanked the members of the company, especially Mrs Eugenia Kyprioti, Theracell Academic Programmes Leader for their hospitality and the nice event and wished to meet again as graduates with the new students next year.
